Instructions to Authors

Overview
Diagnostic and Interventional Radiology (Diagn Interv Radiol) is a medium for disseminating scientific information based on research, clinical experience, and observations pertaining to diagnostic and interventional radiology. The journal is the double-blind peer-reviewed, international, bimonthly, open-access publication organ of the Turkish Society of Radiology. Diagnostic and Interventional Radiology is currently indexed by Science Citation Index Expanded (2016 IF: 1.892) and PubMed MEDLINE.

Editorial and publication processes of the journal are shaped in accordance with the guidelines of the international organizations such as the International Committee of Medical Journal Editors (ICMJE), the World Association of Medical Editors (WAME), the Council of Science Editors (CSE), the Committee on Publication Ethics (COPE), and the European Association of Science Editors (EASE).

Statements or opinions expressed in the manuscripts published in Diagnostic and Interventional Radiology reflect the views of the author(s) and not the opinions of the editors, the editorial board, or the publisher; the editors, the editorial board, and the publisher disclaim any responsibility or liability for such materials. The final responsibility in regard to the published content rests with the authors.

submitting manuscripts
• Authors should submit manuscripts using the online peer review system that can be accessed through the DIR web site (www.dirjournal.org) or using the direct link at https://mc04.manuscriptcentral.com/dir.
• Detailed DIR Author Guidelines can be viewed or downloaded from DIR web site (www.dirjournal.org).
• Diagnostic and Interventional Radiology requires authors to submit an Authorship Contributions Form during the initial submission which is available for download through the journal’s web page.
• Submitted manuscripts should be original contributions; they should not contain any previously published data or be under consideration by another journal.
• Authors are required to make a full statement at the time of submission about all prior reports and submissions that might be considered duplicate or redundant publication and mention any previously published abstracts for meeting presentations that contain partial or similar material in the cover letter.
• Authors must obtain written permission from the copyright owner to reproduce previously published figures, tables, or any other material in both print and electronic formats and present it during submission.

Copyright transfer
Diagnostic and Interventional Radiology requires each submission to be accompanied by a Copyright Transfer Form which can be downloaded from http://www.dirjournal.org. By signing the copyright agreement, the authors hand over the copyright of their work to the Turkish Society of Radiology. In case of a rejection decision, copyright of the manuscript will be returned to the authors.

Conflicts of interest disclosure
Diagnostic and Interventional Radiology requires and encourages the authors and the individuals involved in the evaluation process to disclose any existing or potential conflicts of interests including financial, consultant, institutional, and other relationships that might lead to bias or a conflict of interest. Each contributing author is required to electronically fill in the ICMJE Form for Disclosure of Potential Conflicts of Interest (available at www.icmje.org) and the forms must be submitted during the initial submission.

Initial evaluation and the peer review process
Manuscripts submitted to Diagnostic and Interventional Radiology will first go through a technical evaluation process where the editorial office staff will ensure that the manuscript is prepared and submitted in accordance with the journal’s guidelines. Submissions that do not conform to the journal’s guidelines will be returned to the submitting author with technical correction requests.

All submissions are screened by a similarity detection software (iThenticate by CrossCheck), and those with an overall similarity index of greater than 20%, or duplication rate at or higher than 5% with a single source are returned to the authors without further evaluation along with the similarity report.

Manuscripts that conform to the journal’s guidelines will be reviewed by at least two external and independent peer reviewers during the evaluation process. Originality, high scientific quality, and citation potential of the manuscript are the most important criteria to be accepted for publication. The Section Editor and Editor in Chief are the final authority in the decision-making process for all submissions.

Permissions and reprints
Turkish Society of Radiology handles all requests to reproduce material from Diagnostic and Interventional Radiology. For your convenience, please fill in the permission request form, available for download at the journal’s webpage and e-mail a scanned version to info@dirjournal.org.

Please ensure that you include the full reference of the material you want to use (i.e., year of publication, volume, issue and page numbers, author names, figure numbers where appropriate). Turkish Society of Radiology also requires a detailed overview of how you intend to use the material (i.e., in a book or a journal) and when.
ABDOMINAL IMAGING

128 Original article. Predictive value of MRI-detected extramural vascular invasion in stage T3 rectal cancer patients before neoadjuvant chemoradiation. Y. Sun, J. Li, L. Shen, X. Wang, T. Tong, Y. Gu

135 Pictorial essay. Anterior uterine wall: normal and abnormal CT and MRI findings after cesarean section. A. D. Karaosmanoğlu, A. Güneş, M. N. Özmen, D. Akata

CHEST IMAGING

INTERVENTIONAL RADIOLOGY

146 Original article. Pelvic abscess drainage: outcome with factors affecting the clinical success. D. Akınçi, O. Ergun, Ç. Topel, T. Çiftçi, O. Akhan

153 Original article. Treatment of femoro-popliteal lesions with scoring and drug-coated balloon angioplasty: 12-month results of the DCB-Trak registry. M. Baumhäkel, S. Chkhetia, M. Kindermann

158 Original article. CT fluoroscopy-guided percutaneous osteoplasty with or without radiofrequency ablation in the treatment of painful extraspinal and spinal bone metastases: technical outcome and complications in 29 patients. C. A. Burgard, J. Dinkel, F. Strobl, P. M. Paprottka, N. Schramm, M. Reiser, C. G. Trumm

166 Technical note. Adjustable diameter TIPS in the pediatric patient: the constrained technique. B. C. Perry, E. J. Monroe, G. Shivaram

MODALITY-BASED US, CT, MRI, PET-CT IMAGING

MUSCULOSKELETAL IMAGING

175 Original article. FSE T2-weighted two-point Dixon technique for fat suppression in the lumbar spine: comparison with SPAIR technique. S. Lee, D. S. Choi, H. S. Shin, H. J. Baek, H. C. Choi, S. E. Park
